Database Modelling (E-R diagrams): 1.

• GNG needed volunteers, Campaign, contribution, expense, Donor sets and more.

• No relation between employee and anything?

• Good understanding, but implementation should have relationships between Employees.

SQL table creation (relations from ER diagram, SQL table creates):

• Campaign
 - ID pk serial
• Title
• start date - end date Dates.
• Budget decimal .

SQL queries:

one relation • two relations • three or more relations

where clauses with simple equality • where clauses with logical connectives

joins • aggregate operators (group by, sum, etc.) • nested queries • set operations

• Decent work.

Other comments:

• Okay job, ER diagram could have better design wrt. Employees.
